About Me

Game developer with 5+ years of experience creating immersive 2D/3D systems in Unity, Unreal Engine 5, and Godot. Expert in core gameplay loops, enemy AI behavior design, level layouts, and cross-platform architecture. Fluent in C#, C++, GDScript, and Python. Experienced bridging cloud architectures with real-time client-side gaming systems in solo environments and agile teams. Driven by challenging gameplay problems, with a strong focus on technical stability, data pipelines, and creative game logic.

Skills

Languages	English (TOEFL 106/120 - C1), Italian (A2)
Programming	C#, C++, Python, .NET, GDScript, Java, JavaScript, OOP
Engines	Unity, Unreal Engine 5, Godot
Tools	Blender, Photoshop, Git, Jira, Trello, Docker, Docker Compose
Game Dev	Gameplay Systems, AI Pathfinding/Behavior, UI/UX, Level Design, Particle Systems, Prototyping, Playtesting & Balancing, Debugging, Optimization
AI & Cloud	Machine Learning, Computer Vision, Deep Learning, Reinforcement Learning, Azure
Soft Skills	Teamwork, Communication, Quick Learning, Staying Calm Under Pressure, Mentoring

Work Experience

Lead Software Architect & Full-Stack Developer

Oct 2025 – Present

PoliTOrbital – Turin

- Architected the M.A.R.S. platform from scratch using **FastAPI** and **Python** to model turn-based market states, economic data, and simulation mechanics for the Student Aerospace Challenge.
- Engineered a responsive **React 19** and **TypeScript** strategy dashboard alongside zero-dependency microservices deployed via cross-platform **Docker Compose** infrastructure.

AI/Unity Developer Intern

Sep 2025 – Jun 2026

LingoLooper – Remote

- Shipped full-stack systems and front-end client features (**C#**, **Unity**, **.NET Framework**) for an AI-driven conversational language learning mobile application serving over **500K users**.
- Collaborated directly with the CTO to design, optimize, and build robust systems for real-time cloud-based AI interactions using **Microsoft Azure** and **ASP.NET Core**.
- Engineered a real-time emotion detection pipeline within the Unity-to-backend communication network featuring custom rate-limiting safeguards.

Game Programmer and Designer

Mar 2020 – Aug 2025

Fake Reality / FrostByte

- Programmed 6+ indie games in agile teams (2–5 devs) using **Unity**, **UE5**, and **Godot**.
- Led engineering on *ExoBarrier* and *Last Defence*; built drone AI and upgrade skill trees.
- Deployed custom gameplay loops, AI logic, and UI states across 5+ titles spanning 30+ levels.
- Ranked in the **top 5%** of 1,700+ entries in **Brackeys Game Jam 2021.2** with *Children of Chaos*.
- Iterated mechanics pre-release using playtester feedback, bug reports, and balance profiling.

Graduate Research Assistant – Robotics & Cloud Labs

Nov 2023 – Oct 2024

Ferdowsi University

- Constructed a real-world driving simulation covering **50+ km of coordinate terrain** inside **Unreal Engine 5** using **Cesium** to enable high-fidelity automated ML testing.
- Programmed robust synthetic data-capture and image sequence pipelines in **C++** to supply computer vision networks, driving a **30% accuracy gain** in neural 3D scene reconstructions.
- Engineered 3 cloud workflow scheduling algorithms, reducing completion times by **22%**.

Computer Vision Intern

Jul 2023 – Sep 2023

Veerasense

- Formulated and benchmarked AI-driven image analysis and object segmentation pipelines for industrial livestock vision systems using custom datasets containing thousands of labeled images.
- Fine-tuned convolutional networks (YOLO, SAM, U-Net) and exceeded expectations by accelerating research timelines, completing a 5-month deployment roadmap in just 3 months.

Mentor and Coordinator

Feb 2022 – Mar 2023

Game Community, Ferdowsi University

- Promoted student-led game engineering pipelines through tailored technical code reviews, design mentorship, and game engine workshops (**Unity / C#**) helping peers build playable portfolio games.

Education

MSc in Computer Engineering – AI and Data Analytics

Sep 2024 – Present

Politecnico di Torino

BSc in Computer Engineering

Sep 2019 – Feb 2024

Ferdowsi University

Projects

M.A.R.S. Project

[View on GitHub](#)

Market Analysis & Risk Simulation platform validating aerospace macroeconomic data with turn-based strategy mechanics.

- Role: Lead Software Architect. Tech: FastAPI, Python 3.11, Pydantic, React 19, TypeScript, Docker Compose.

LingoLooper

[App Store](#) | [Google Play](#)

AI conversational language learning game serving 500K+ players. Built client communication loops and rate-limited engine features.

- Role: AI/Unity Developer Intern. Tech: Unity, C#, Microsoft Azure, .NET, ASP.NET Core.

ExoBarrier

[View on Portfolio](#)

2D tower defense game created in Unity. Designed turret frameworks, real-time economy balancing, and custom enemy tracking matrices.

- Role: Lead Programmer, Game Designer, Level Designer. Tech: Unity, C#, Photoshop.

Last Defence

[View on Portfolio](#)

3D tower defense game built in Unity. Programmed autonomous drone AI pathfinding logic, upgrade skill trees, and overall scene state progression.

- Role: Lead Programmer, Game Designer, Gameplay AI. Tech: Unity, C#, Blender, Photoshop.

Children of Chaos

[Play on Itch.io](#)

2D roguelike platformer crafted for the Brackeys Game Jam (Ranked in top 5% of 1,700+ submissions). Written with modular upgrade trees and pathfinding physics.

- Role: Lead Programmer, Game Designer, Gameplay AI. Tech: Unity, C#, Photoshop.

AI Abalone Game

[View on Portfolio](#)

Strategic board game simulation made in Godot. Features an efficient Minimax engine integrated with alpha-beta pruning, beam search filtering, and state caching.

- Role: Lead Programmer, AI Engineer. Tech: Godot, GDScript.
